Notes
With Paul's approval, this data has been pulled directly from www.UGQ.com - We believe that the amount of down UGQ uses in their quilts is more than adequate in relation to the temperature rating.

To determine the girth that's best for you, determine whether you are a side sleeper or a back sleeper. If in doubt, we recommend that you measure for side sleeping. Lying on your side, have someone measure you from side to side, starting at the floor up to your chest, over your shoulder and back down to the floor on the opposite side. Add between 6" and 8" to this measurement to determine the appropriate girth for you. Active sleepers should size up one full size in width.

Measurements are based on a quilt with a Zipper & Draw Cord foot box, the foot box fully opened, the quilt laying out flat and then pulled snug

If you wish to do a fully insulated footbox, add 1-2 oz of extra down to your order
